Experiment -1

AIM:

Create an IAM user with programmatic access only, download the access key and secret key, and document the steps with screenshots.Then set up a billing alert for the account so that an email is received when the Free Tier limit is about to be crossed.

Description:

IAM (Identity and Access Management) is an AWS service used to manage users and permissions securely. Created a new IAM user and assigned the required permissions. Set an AWS Budget to monitor cloud expenses and control spending. Configured alerts to track budget limits.

Steps:

1. Open the AWS Management Console and navigate to IAM (Identity and Access Management).

2. Select Users, choose Create user, and enter a user name.

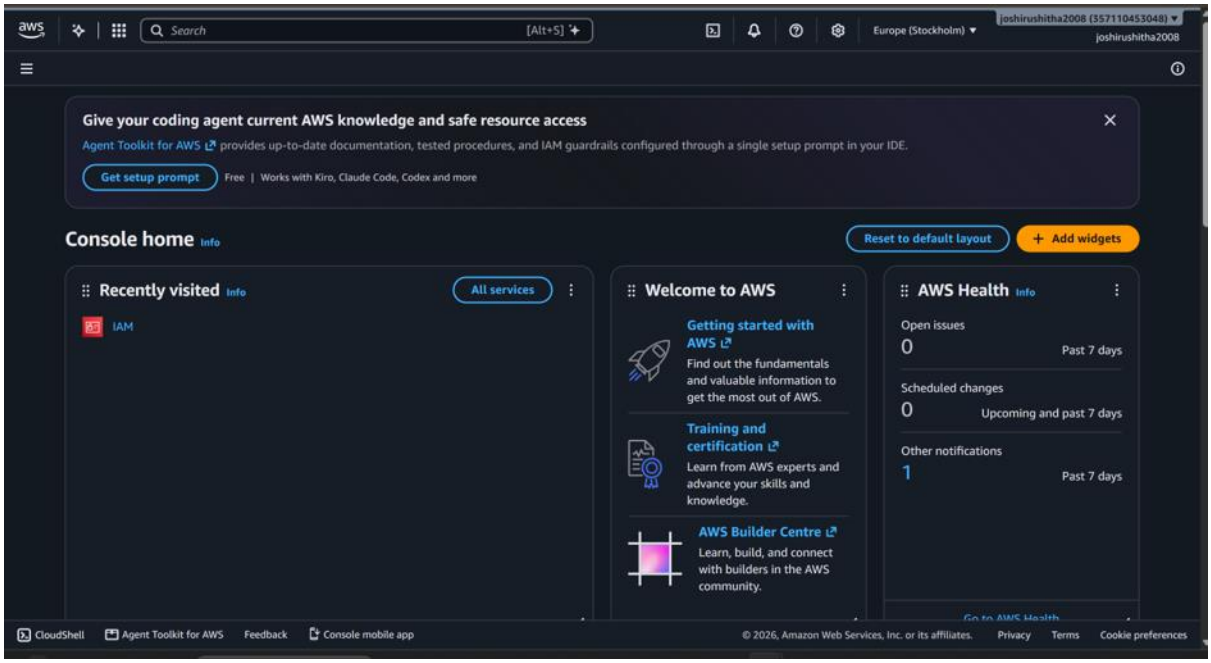

3. Configure permissions by attaching the required policy, then review and create the IAM user.

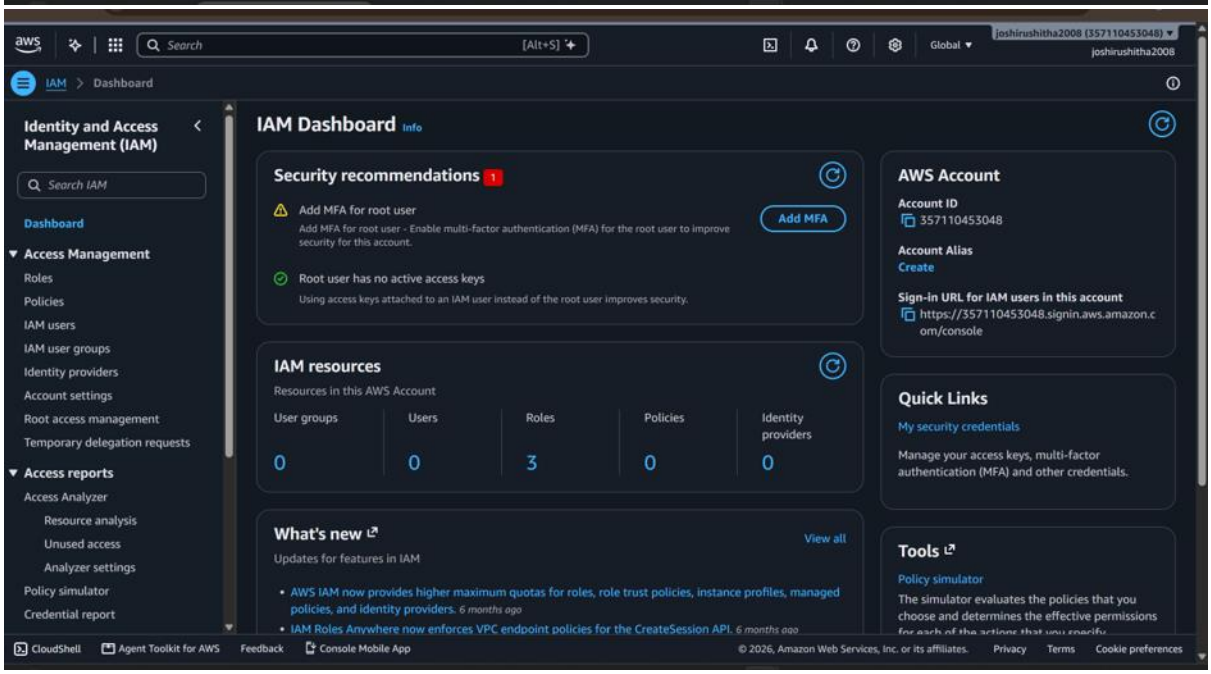

4. Open the created user and go to Security credentials. Create an access key for command-line/programmatic use.

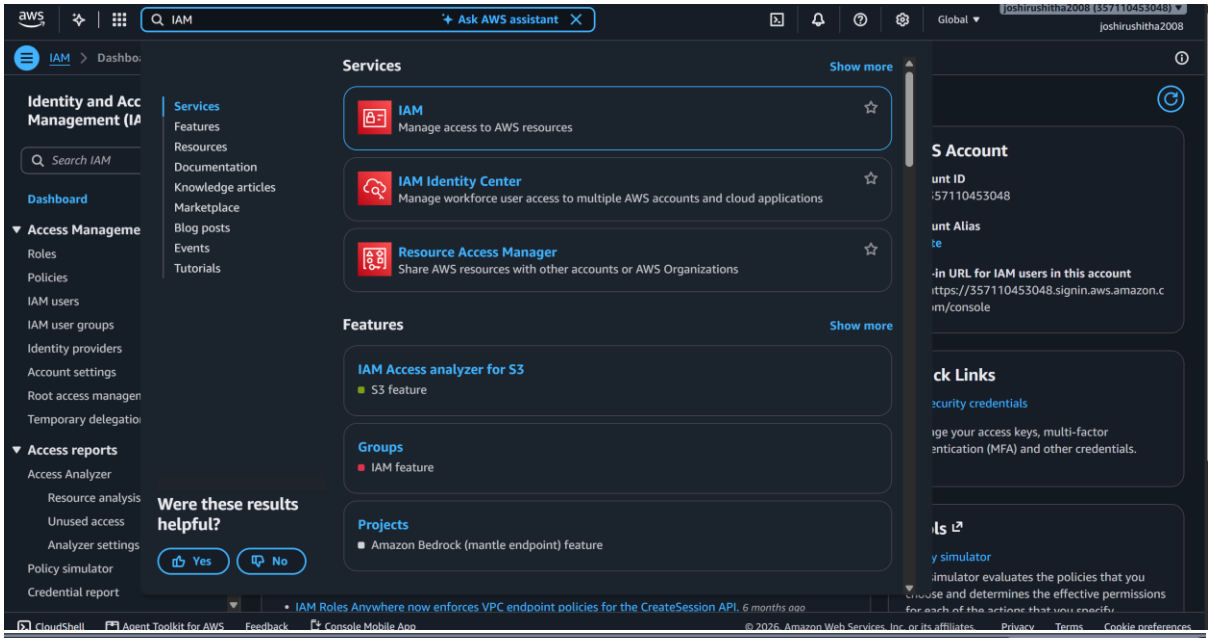

5. Download and securely store the Access Key ID and Secret Access Key. Do not share these credentials.

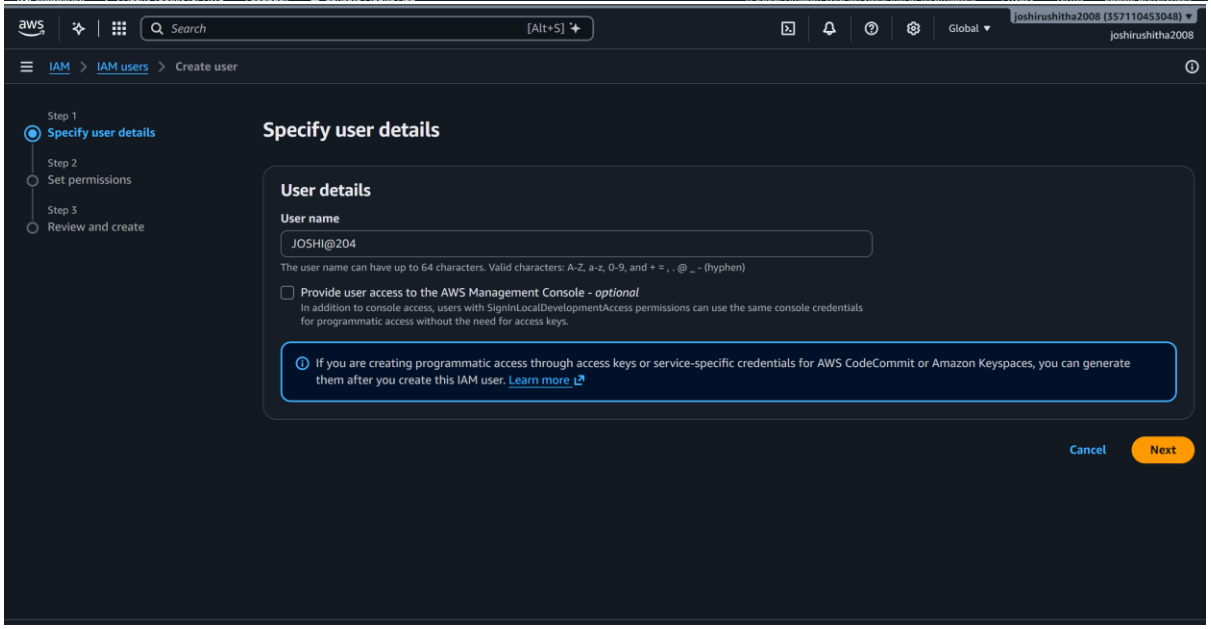

6. Open Billing and Cost Management, select Budgets, and choose Create budget.

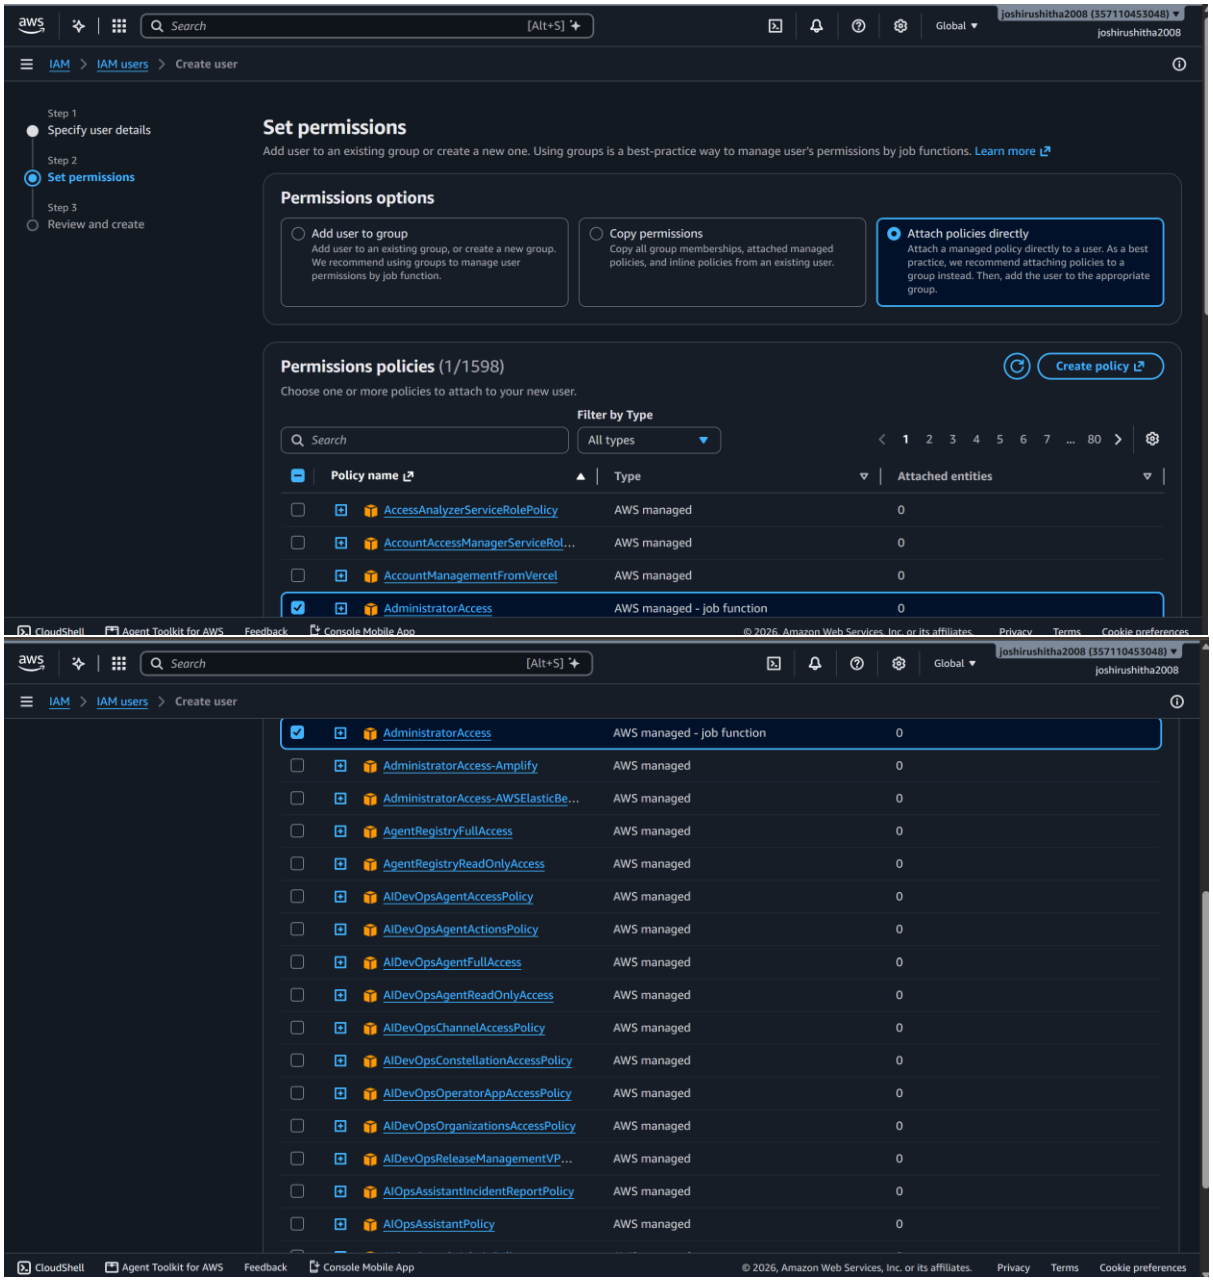

7. Enter a budget name and email recipient, configure the budget threshold, and create the budget to receive email alerts.

Security recommendations 1
Add MFA for root user
Add MFA for root user - Enable multi-factor authentication (MFA) for the root user to improve security for this account.
Add MFA
Root user has no active access keys
Using access keys attached to an IAM user instead of the root user improves security.

User details
User name
JOSHI@204
The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)
Provide user access to the AWS Management Console - optional
In addition to console access, users with SignInLocalDevelopmentAccess permissions can use the same console credentials for programmatic access without the need for access keys.
If you are creating programmatic access through access keys or service-specific credentials for AWS CodeCommit or Amazon Keyspaces, you can generate them after you create this IAM user. Learn more

Set permissions
Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. Learn more
Permissions options
Add user to group
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.
Copy permissions
Copy all group memberships, attached managed policies, and inline policies from an existing user.
Attach policies directly
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.
Permissions policies (1/1598)
Choose one or more policies to attach to your new user.
Create policy

We're preparing your cost and usage data. This process can take up to 24 hours after you first visit the Billing and Cost Management console. In the meantime, you can view bills, make payments, and manage your preferences and settings. Once your data is ready, you can view cost breakdowns, forecasted costs, savings opportunities, and more on this page. To learn more about AWS Cloud Financial Management, visit the Getting started page.

Output:

The IAM user was created successfully with programmatic access, and the access credentials were downloaded. The AWS budget was created with an email notification recipient to monitor usage and alert when the configured threshold is reached.
